

SENIOR VMS

Our Senior Variable Message Signs (“Senior VMS”) are all less than 2 years old. They are the highest quality message sign available in Australia. All our Senior VMS use a combined Flip-Disc and Light Emitting Diode (LED) display.

At night the LED lights allow drivers to read a 3 page message while traveling at 110 kph. During the day the reflective flip disks ensure the same message can be read – even in bright sunshine and from acute angles. Cheaper LED-only VMS are unreadable in these conditions, making our Senior VMS the only choice for critical messages to high speed traffic.

**FREE REMOTE
MESSAGE
CHANGES ON ALL
VMS!**

Critical features:

- *Sign dimensions 2.9m wide by 1.9m high*
- *Sign midpoint can be raised to over 3.3m off the ground*
- *Display of 24 characters on three lines*

JUNIOR VMS

The Impact Hire fleet of Sykes Junior Variable Message Signs (“Junior VMS”) are the ideal message board for traffic control and advertising signage when traffic speeds are below 80 kph. Like the Senior VMS our fleet of Junior VMS all use the combined Flip-Disc and Light Emitting Diode (LED) display, ensuring your message is clearly visible all day and all night.

The wide viewing angle of the display is the industry leader, affording passing traffic the maximum opportunity to read the message. Our Junior VMS are primarily used to display traffic messages, but have also be successfully used to enhance the advertising message of car yards and furniture stores with street frontage. The Junior VMS is ideal in pedestrian areas.

Critical features:

- *Sign dimensions 1.9m wide by 1.1m high. Sign midpoint is 2.7m off ground*
- *Small trailer footprint makes positioning easy*
- *Display can be both graphical and text of different font sizes*
